

BUSINESS AND CONSUMER SURVEYS

ECONOMICS RESEARCH CENTRE
UNIVERSITY OF CYPRUS

June 2019

SUMMARY

- In June 2019, economic sentiment in Cyprus deteriorated as the Economic Sentiment Indicator (ESI-CypERC) decreased by 1.9 points compared with May 2019. The decrease resulted from weaker business confidence in the services and construction sectors.
- The decline in the Services Confidence Indicator was driven by firms' less favourable views on their past performance (business situation and demand), and downward revisions in demand expectations.
- The small increase in the Retail Trade Confidence Indicator was driven by firms' improved assessments of past sales and current stock volumes.
- The Construction Confidence Indicator declined due to firms' more negative assessments of their current level of order books, and downward revisions in employment expectations.
- The increase in the Industry Confidence Indicator resulted from firms' improved views on the current level of their order books and their stocks of finished products. Upward revisions in production expectations also contributed to the increase in the Confidence Indicator.
- The Consumer Confidence Indicator increased marginally mainly due to consumers' less pessimistic responses regarding their intentions to make major purchases over the next 12 months.

Notes:

¹ The weights used in the calculation of the Economic Sentiment Indicator constructed by the Economics Research Centre (ESI CypERC) reflect the contribution of each sector to the GDP of Cyprus.

² GDP growth: GDP (at constant prices, seasonally and working day adjusted) is compared to the same quarter of the previous year (Source: Statistical Service of Cyprus).

The Economics Research Centre of the University of Cyprus (CypERC) and RAI Consultants Ltd participate in the Joint Harmonised European Union Programme of Business and Consumer Surveys. CypERC acknowledges funding from the European Union, the Ministry of Finance and the University of Cyprus for conducting the project "Business and Consumer Surveys" in Cyprus.

Co-funded by
the European Union

Notes:

¹ The balance is the difference between the percentage of positive responses and the percentage of negative responses. Positive responses refer to "increase", "improvement", "above normal", "very likely", "fairly likely", etc., while negative responses refer to "decrease", "deterioration", "below normal", "not at all likely", "not likely", etc. Data are seasonally adjusted.

² The weights used in the calculation of the Economic Sentiment Indicator reflect the contribution of each sector to the GDP of Cyprus.

³ The calculation of the confidence (composite) indicator is described in http://ec.europa.eu/economy_finance/indicators/business_consumer_surveys/userguide_en.pdf and https://ec.europa.eu/info/files/revise-consumer-confidence-indicator_en.

⁴ The responses to this question are used in the calculation of the confidence (composite) indicator for each survey.

⁵ Following a suggestion by the European Commission, the responses to this question are not adjusted for seasonality.
